4. Detailed Analysis of Failures

Test Case ID: TC-API-001

Description: Register a New User

Status: Failed

Details: The API request returned a 404 status code, indicating a server error. Further investigation with the development team is recommended.

Test Case ID: TC-API-002

Description: Login with Registered User

Status: Failed

Details: The API request returned a 404 status code, indicating a server error. Further investigation with the development team is recommended.

Test Case ID: TC-API-003

Description: Update User Profile

Status: Failed

Details: The API request returned a 404 status code, indicating a server error. Further investigation with the development team is recommended.

Test Case ID: TC-API-004

Description: Change User Password

Status: Failed

Details: The API request returned a 404 status code, indicating a server error. Further investigation with the development team is recommended.

Test Case ID: TC-API-005

Description: Create a New Note

Status: Failed

Details: The API request returned a 404 status code, indicating a server error. Further investigation with the development team is recommended.

Test Case ID: TC-API-006

Description: Retrieve All Notes

Status: Failed

Details: The API request returned a 404 status code, indicating a server error. Further investigation with the development team is recommended.

Test Case ID: TC-API-007

Description: Update an Existing Note

Status: Failed

Details: The API request returned a 404 status code, indicating a server error. Further investigation with the development team is recommended.

Test Case ID: TC-API-008

Description: Delete a Note

Status: Failed

Details: The API request returned a 404 status code, indicating a server error. Further investigation with the development team is recommended.

5. Overall Execution Observations

- **Execution Time:** Total execution time is very high cause this dummy website is very delayed response so i have to put many paus statement.
- **Stability:** The majority of the tests passed successfully, indicating stable application functionality across most scenarios.
